Northing: 412795

Client.

Rainham Steel
Mannaberg Way,
Scunthorpe,
North Lincolnshire,
DN16 8XF

Brief.

Rainham Steel are submitting a planning application for 2 No. overhead crane gantries with 4 No. single girder cranes at their steel storage and distribution site.

This basic Flood Risk Assessment is provided to confirm there is no additional flood risk than currently experienced on site under the current use.

Assessment.

The current site is used for storage and general distribution of steel.

The area of the site where the cranes are to be located is currently hardcore which soaks away naturally into the ground. This is to remain after they have been constructed.

Therefore based on the above the existing flood risk is not increased by the proposed cranes.
