1.0 INTRODUCTION

- 1.1 This report describes a Geotechnical & Geo-Environmental Desk Study on a site off the A18 Trunk Road, Althorpe, Scunthorpe, South Humberside, carried out for our Client, WFW Developments Limited.
- 1.2 The objectives of this report have been to obtain preliminary information relating to the geotechnical and geo-environmental conditions pertaining to the site and its surroundings and to produce an assessment of these factors in relation to the proposed development at the site.
- 1.3 We have been advised that it is proposed to develop the site with 30 residential houses, private gardens and associated infrastructure. It has been assumed in the production of this report that ground levels across the site will not change significantly in the course of the development. If the assumptions made above and in the later sections of this report are not the case, then the recommendations presented within this report may require some amendment.
- 1.4 This report has been produced on behalf of the Client, WFW Developments and no responsibility is accepted to any third party for all or any part. This report should not be relied upon or transferred to any other parties without the express written authorisation of Emcus Limited. If any unauthorised third party comes into possession of this report, they rely on it at their own risk and the authors owe them no duty of care or skill.
- 1.5 The findings and opinions conveyed from this desk study are based on information obtained from a variety of sources, as detailed within this report, which Emcus Limited believes are reliable. Nevertheless, Emcus Limited cannot and does not guarantee the authenticity or reliability of the information it has obtained from these sources and used in the production of this report.
- 1.6 The site plans and drawings enclosed in this report should not be scaled off.
- 1.7 It is recommended that the preliminary assessments within this report are confirmed by appropriate intrusive investigation, prior to any irrevocable actions being taken.

2.0 SITE DESCRIPTION

2.1 Site Location & Access

2.1.1 The site, which is approximately rectangular in shape and 0.78 hectares is located on the western side of the A18 Trunk Road, Althorpe, near Scunthorpe, South Humberside, (see drawings J1815/01 and J1815/02). The Ordnance Survey grid reference for the approximate centre of the site is SE 8367 1058.

2.1.2 For the purpose of the site walkover, (undertaken on 4th July 2019) access to the site was gained directly from the A18, which was present immediately beyond the easternmost site boundary.

2.2 Site Description & Surroundings

2.2.1 At the time of the walkover, the site was generally comprised an approximately flat lying parcel of land overgrown with dense bushes, brambles, rushes / reeds and stinging nettles, etc. The vegetation was less dense in the eastern area of the site, where cream gravelly hardstanding was visible between the bushes / shrubs.

2.2.2 In addition, the southern area of the site generally comprised a gravel track. The eastern part of the track was, however, surfaced with patchy asphalt and remnants of a buried elongate brick structure were exposed in the south-eastern area of the site. The southern margin the site (i.e. to the south of the track) generally comprised an overgrown slope which graded from the north, approximately 2m down to the south.

2.2.4 The eastern boundary of the site was generally defined by a metal palisade fence and gates. The northern boundary of the site was generally defined by a dilapidated post and wire fence. The western and southern boundaries of the site were generally undefined on the ground at the time of the walkover.

2.2.5 An approximately 5m high roughly vegetated railway embankment was present immediately beyond the northern boundary of the site. An undeveloped field was present immediately beyond the southern boundary of the site. Roughly vegetated scrub land was generally present beyond the western boundary of the site. The track which was present in the south of the site extended beyond the south-western site boundary. The A18 trunk road was present immediately beyond the eastern boundary of the site with commercial / industrial premises beyond.

3.0 DESK STUDY

3.1 Historical Maps

- 3.1.1 Extracts of historical maps and aerial images of the site area, included as part of a pack of the 'Envirocheck' information obtained from the Landmark Information Group Ltd, have been reviewed to obtain an indication of the history of the site and its environs. These 'Envirocheck' plans are reproduced in Appendix A of this Report. The plans are dated between 1854 and 2019 and generally comprise a montage of extracts, taken from the original old maps / images of approximately the same publication dates.
- 3.1.2 Before discussing the information presented on the historical plans the readers attention is brought to the fact that the area superimposed onto the plans comprises the site and the area immediately beyond the western site boundary.
- 3.1.3 The earliest historical maps dated 1854 to 1951 indicate that the southern area of the site generally comprised part of an east / west orientated railway line and part of a railway station (Althorpe Station). A station building is indicated to have been present in the central-southern area of the site and the eastern end of a platform was present in the south-western area of the site. Both the railway line and station structures are indicated to have been constructed on an embankment. The maps dated 1854 – 1951 indicate that the northern area of the site was undeveloped and comprised part of a larger field, presumably used for agriculture.
- 3.1.4 The historical map dated 1956 indicates that a railway line remained in the southern area of the site, although the station buildings were no longer present. The historical map dated 1956 indicate that the northern area of the site remained undeveloped.
- 3.1.5 The historical maps dated 1966 – 2019 no longer identify the railway lines on the site and indicate that a track was present along the southern margin of the site. The maps from that period (1966 – 2019) indicate that the historic railway embankment was re-graded.
- 3.1.6 The historical maps dated 1854 to 1956 indicate that the railway line and embankment generally extended beyond the eastern and western boundaries of the site, including a bridge over a road (A18) to the south-east of the site. Elsewhere, the maps dated 1854 – 1938 indicate that the area surrounding the site generally comprised undeveloped fields with some scattered residential housing and associated infrastructure. The historical maps dated 1951 – 1956 also indicate an approximately east / west orientated railway line constructed on an embankment was present immediately beyond the northern boundary of the site. That railway is indicated to have crossed a road (A18) on a bridge immediately beyond the north-eastern boundary of the site. The maps dated 1951 – 1956 also indicate a railway junction approximately 10m beyond the north-western corner of the site, and a siding extending north-eastwards towards a depot. The latter is indicated to have been present 200m to the north-east of the site. The maps dated 1951 – 1956 also indicate a circular reservoir 110m to the south-east of the site.
- 3.1.7 The historical maps dated 1966 – 2019 indicate that the east / west orientated railway and embankment remained immediately beyond the northern boundary of the site and

the area beyond was generally developed with residential housing and associated infrastructure. The maps dated 1966 – 1987 also identify the historic reservoir 110m to the south-east of the site as a ‘pond’ and indicate that an additional elongate pond was present 25m to the east of the site. The maps dated 1966 – 1987 also indicate ‘depots’ 70m, 110m and 180m to the east and south-east of the site. A tank is indicated to have been present 210m to the south-east of the site within the group of depots. The maps dated 1980 – 2019 indicate that the ponds to the east and south-east of the site were gradually infilled / regraded and that area developed with warehouses. The maps dated 2006 – 2019 also indicate that the historic depot 200m to the north-east of the site was redeveloped with residential housing and associated infrastructure. The historical maps dated 1951 – 2019 indicate that the area to the south of the site remained generally undeveloped with a drain immediately beyond the southern boundary of the site.

3.2 Geology, Hydrogeology & Hydrology

3.2.1 The following publications of the British Geological Survey (BGS) have been reviewed with respect to the strata underlying the site:

- Sheet 88 Doncaster, Solid Edition, Scale 1:63,360, dated 1969.
- Sheet 88 Doncaster, Drift Edition, Scale 1:63,360, dated 1969.

3.2.2 The published geological maps indicate that the natural strata beneath the site comprises ‘Alluvium’, underlain by Keuper Marl from the Triassic. The latter is nowadays more commonly referred to as the Mercia Mudstone Group.

3.2.3 Alluvium typically comprises unconsolidated clayey sands and sandy clays with occasional peat. The Mercia Mudstone group of strata typically comprise red-brown blocky mudstones with occasional thin sandstone and siltstone horizons.

3.2.4 In addition to the natural strata described above, Made Ground is anticipated beneath the site, associated with the historic railway embankment.

3.2.5 The extracts of the Aquifer Designation maps within the Envirocheck report indicate that the alluvium underlying the site is a Secondary A Aquifer and the bedrock underlying the site is a Secondary B Aquifer.

3.2.6 The historical and contemporary Ordnance Survey information do not indicate any named watercourses within 250m of the site. However, an un-named drain is present immediately beyond the southern boundary of the site.

3.3 ‘Landmark’ Environmental Database Report

3.3.1 A search and review has been undertaken of information held on the Landmark ‘Envirocheck’ database, which provides information on the environmental setting of the site. A copy of the ‘Envirocheck’ Report is reproduced in Appendix B of this report, with the salient points summarised below:

- The Envirocheck report indicates that the site generally comprised part of a historic and registered landfill site. (The southern margin of the site is indicated to be located outside the landfill). That landfill is reported to have been operated between 1991 and 1994 and accepted inert and industrial waste. The landfill is identified as ‘large’ with an input rate of 75,000 to 250,000 tonnes per year.
- The Envirocheck report identifies a single Registered Waste Transfer Site within 250m of the subject site. That transfer site is reported to be 41m to the south-east of the site and the license status is identified as lapsed/cancelled/surrendered.
- The Envirocheck report identifies 2 Local Authority Pollution Prevention & Controls (PPCs) within 250m of the site. The PPCs are located 97m to the north-east of the site, described as ‘PG3/5 Coal, coke and coal product processes’, (Permitted); and 100m to the south-east of the site and ‘PG3/15 Mineral drying and roadstone coating processes’ (Permitted).
- The Envirocheck report identifies a single Local Authority Pollution Prevention & Control Enforcement within 250m of the site. The enforcement is reported to have been located 100m to the south-east of the site and is described as ‘Air Pollution Control Enforcement Notice’.
- The Envirocheck report identifies a single Control of Major Accident Hazardous Site (COMAH) within 250m of the site. The COMAH is located 194m to the east of the site and the status of the entry is described as ‘Record ceased to be supplied under COMAH regulations’.
- The Envirocheck report identifies 4 Contemporary Trade Directory Entries within 250m of the site. Those entries are located 83m to the north of the site, described as ‘Garage Services’, (Inactive); 132m to the east of the site, described as Electrical Goods – Manufacturers & Wholesalers (Inactive); 198m to the north of the site, described as ‘Carpet, Curtain & Upholstery Cleaners’ (Active); and 208m to the east of the site, described as ‘Packaging & Wrapping Equipment & Supplies’, (Inactive).

3.4 Radon

- 3.4.1 The information provided by the Landmark Information group indicates that no radon protection measures are required in the construction of new dwellings or extensions at the site.

4.0 PRELIMINARY CONCEPTUAL SITE MODEL

4.1 Introduction

4.1.1 Current policy in the United Kingdom for the control and treatment of potential / actual contamination on development sites is based on a 'suitable for use' principle. In effect this means that where the contamination that may be present on a site is deemed to pose an unacceptable risk to human health or the environment, appropriate remedial or mitigation measures should be provided, appropriate to the intended form of development. The current practice with respect to the assessment of the risks posed by potentially contaminated land in the England & Wales is to consider possible Source – Pathway – Receptor (Target) linkages between any contaminant sources on, or in the vicinity of, the site and sensitive potential targets (site users, controlled waters, etc.). This Source – Pathway – Receptor approach whilst common to all developments must be tailored to the conditions and environment of the specific site by use of a 'Conceptual Site Model'. At a preliminary (eg. Phase 1 Desk Study) stage, the Conceptual Site Model may be limited to a qualitative assessment only, but with more information from future intrusive investigations, it may be appropriate to develop more detailed quantitative models.

4.2 Preliminary Conceptual Site Model

4.2.1 Potential Contaminant Sources

From the desk study researches, potential contaminant sources affecting the site can be split between on site and off site sources and further divided between current and historical land uses. On this basis, the following potential contaminant sources could be considered.

- On Site Sources - Current/Recent and Historical Land Uses;
 - Possible contamination associated with Made Ground and landfilled materials on the site. - Potentially a range of metals, Poly Aromatic Hydrocarbons (PAHs), fuels, oils, lubricants / greases, solvents, coolants, Polychlorinated Biphenyls (PCBs) & asbestos.
 - Possible contamination associated with the historical usage of the site as a railway line and station. – PAHs and fuels.
 - Possible ground gases from deep Made Ground and landfilled materials on the site. – Potentially carbon dioxide and perhaps methane.
- Off-site sources - Current/Recent and Historical Land Uses;
 - Possible ground gases from the infilled / regraded historical ponds 25m and 110m to the east of the site and the other areas of the landfill beyond the western boundary of the site – Potentially carbon dioxide and perhaps methane.

4.2.2 Potential Receptors / Targets

Again these may be On-Site or Off-Site, Animal / Human (End Users) or Environmental (Controlled waters, etc.) Receptors / Targets.

- Human & Animal On-site & Off-site;
 - Construction Workers, End Users, Members of the Public, Users & Occupiers of adjacent premises.
 - Build-up of ground gasses in confined spaces (i.e. compartmental rooms, service chambers, etc.).
 - Local wildlife.
- Environmental, On-site & Off-site:
 - Ground water – The alluvium underlying the site is a Secondary A Aquifer and the bedrock underlying the site is a Secondary B Aquifer.
 - Surface water – A drain is present immediately beyond the southern boundary of the site.

4.2.3 Pathways

Migration pathways between the above potential contaminant sources and receptor targets could include, with respect to the various human and environmental receptors / targets:

- Pathways to Animal / Human Targets:
 - On-site (Construction Workers, End Users and members of the Public)
 - Dermal contact.
 - Ingestion of soils.
 - Inhalation of dusts, etc.
 - Migration of ground gasses through permeable strata to accumulate in confined spaces (i.e. compartmental rooms, service chambers, etc.).
 - Off-site
 - Inhalation of dusts, etc.
- Pathways to environmental Receptors / Targets:
 - In ground migration/leaching to ground waters. - The alluvium underlying the site is a Secondary A Aquifer and the bedrock underlying the site is a Secondary B Aquifer.
 - Surface Water run-off. – A drain is present immediately beyond the southern boundary of the site.

5.0 PHASE I ASSESSMENTS

5.1 Preliminary Geo-Environmental Assessment

- 5.1.1 The historical usage of the site as railway line / embankment and part of a landfill has the potential to have resulted in contaminated ground and ground-water being present beneath the site. The potential contaminants associated with those historical usages of the site could include metals, ash, fuels, oils, lubricants / greases, coolants, solvents, asbestos and PCBs, etc. If concentrations of the potential contaminants in the soils exceed the published Soil Guideline Values / assessment criteria for the proposed residential end usage of the site, some geo-environmental remediation of the site is likely to be required during the proposed development. That remediation could include the excavation and removal from site of any gross contamination and / or the provision of an environmental capping layer at the site. In addition, a drain is present immediately beyond the southern boundary of the site. As such, potential remediation of the ground / ground-water beneath the site may be required to reduce the potential for the site to impact environmental receptors.
- 5.1.2 Furthermore, deep Made Ground and landfilled material beneath the site and the adjacent area (including the infilled / re-graded ponds to the east of the site) has the potential to generate ground gases which may impact the proposed development.

5.2 Preliminary Geotechnical Assessment

- 5.2.1 It is considered that the Made Ground and / or landfilled materials beneath the site are unlikely to provide a suitable bearing strata for the proposed residential houses. Furthermore, the site is indicated to be underlain by Alluvium. The latter typically comprises unconsolidated clayey sands and sandy clays with occasional peat.
- 5.2.2 Subject to the depth of the Made Ground beneath the site and characteristics of the underlying natural strata, it is considered that alternative foundation solutions such as piles, or vibro-improvement may be required

6.0 RECOMMENDED FURTHER WORKS

6.1 It is recommended that the Phase 1 assessments within this desk study are confirmed by appropriate intrusive investigations and assessments, prior to any irrevocable actions being taken. It is considered that investigation should generally comprising the following:

- The advancement of trial pits across the external areas of the site to investigate the general ground conditions and recover representative samples of the strata for chemical laboratory analyses.
- The advancement of boreholes to investigate the deeper ground / ground water conditions and allow the installation of monitoring standpipes.
- At least 6 post site works visits to monitor the standpipes for a range of ground gases (including carbon dioxide & methane) and gas flow over a 3 month monitoring period.
- Analyses of representative samples at a UKAS/MCERTS accredited laboratory for a range of potential contaminants including metals, metalloids, speciated PAHs, asbestos, Total Petroleum Hydrocarbons, Volatile & Semi-volatile Organic Screens and PCBs. – All subject to review in light of the ground conditions encountered.
- Management & supervision of the site works by a suitably experienced geo-environmental engineer and preparation of the interpretative report including appropriate geo-environmental assessments and remediation recommendations.

6.2 It is considered the desk study indicates that the site should be suitable for residential redevelopment subject to appropriate geo-environmental remediation being undertaken and foundation / geotechnical solutions. It is anticipated that the requirement to undertake appropriate investigations, geo-environmental remediation and measures to ensure foundation / land stability will be included in any planning permission granted for the site.

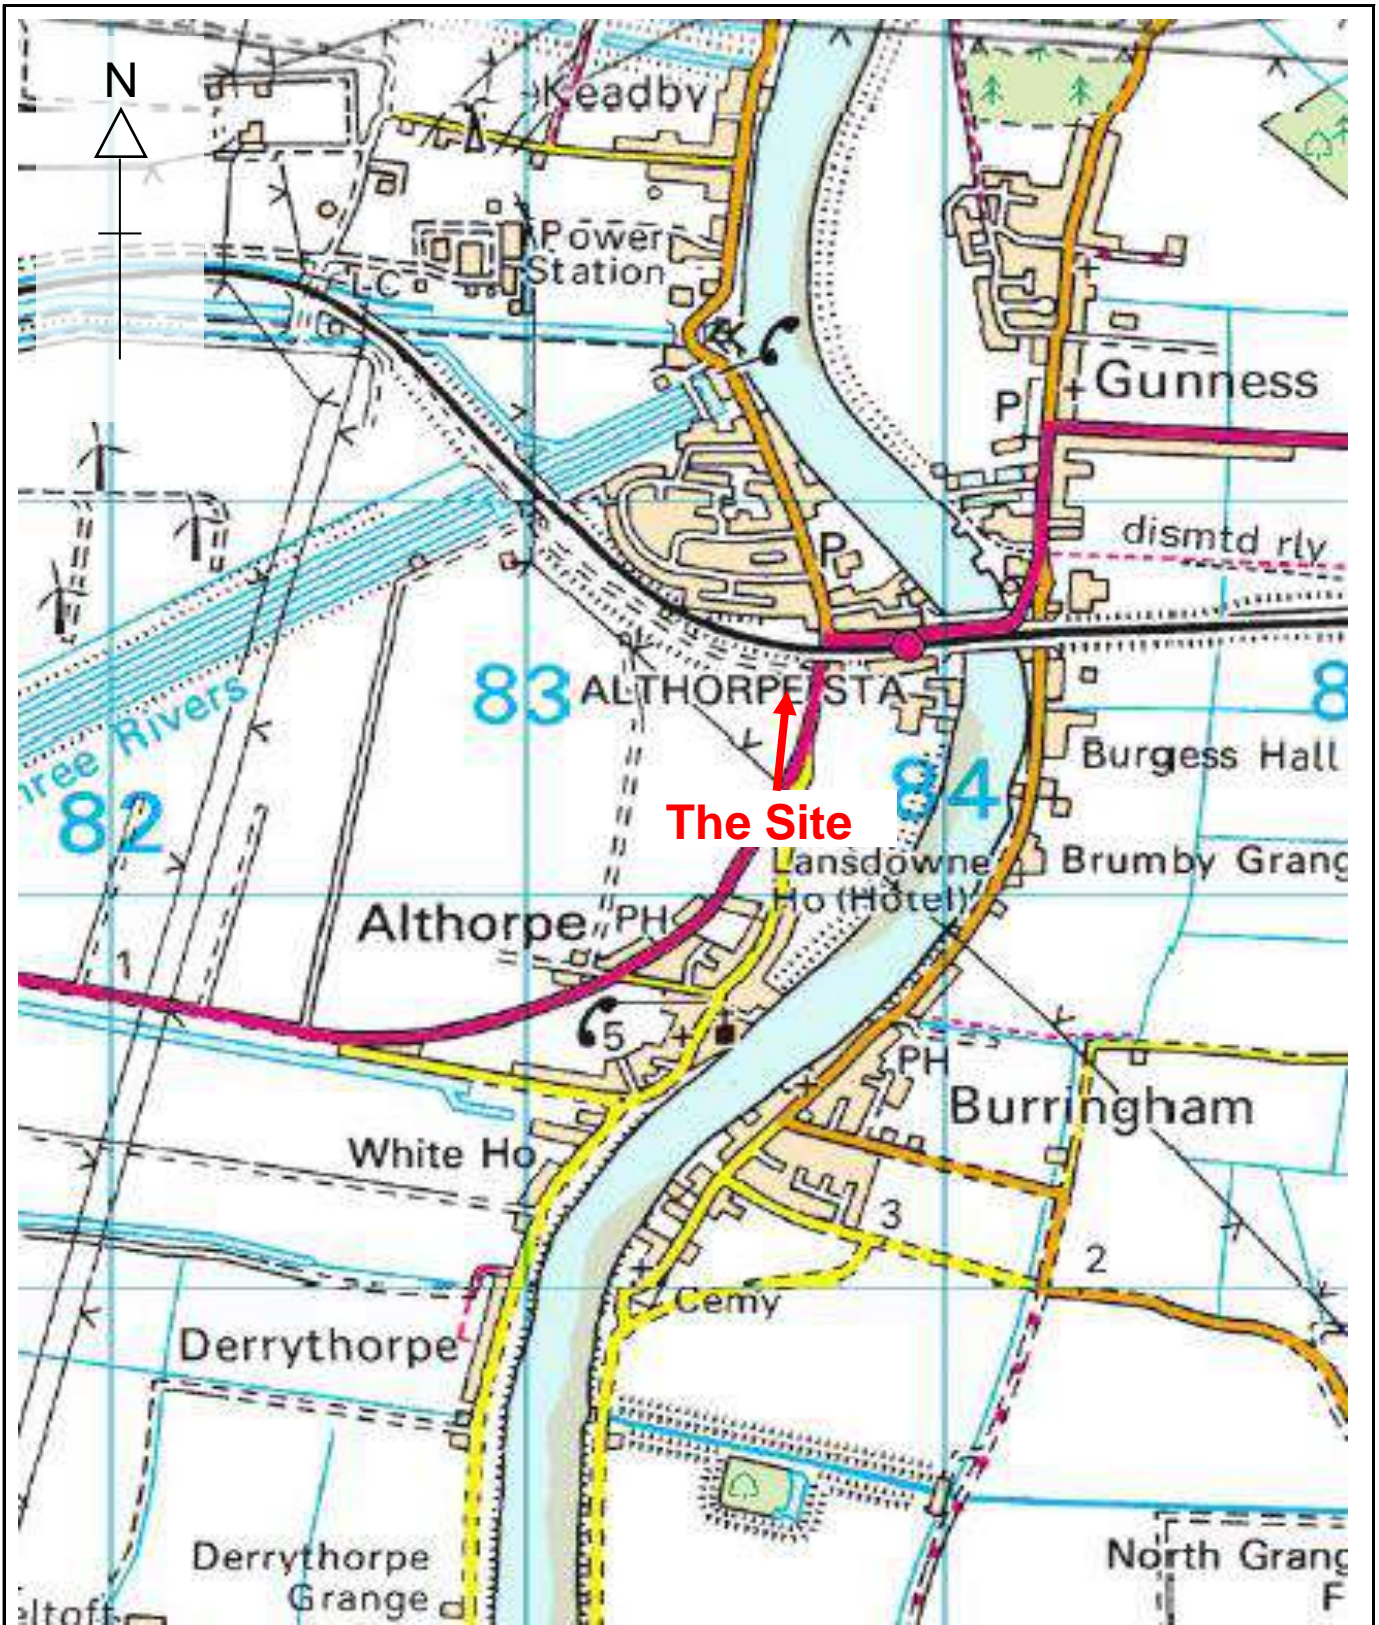

We trust the above report is suitable for your present requirements. Should you have any comments or queries, wish to discuss any of the above matters, or require any further assistance, please do not hesitate to contact us.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Waste	Version	Update Cycle
BGS Recorded Landfill Sites British Geological Survey - National Geoscience Information Service	June 1996	Not Applicable
Historical Landfill Sites Environment Agency - Head Office	July 2018	Quarterly
Integrated Pollution Control Registered Waste Sites Environment Agency - Anglian Region	October 2008	Not Applicable
Licensed Waste Management Facilities (Landfill Boundaries) Environment Agency - Anglian Region - Northern Area	July 2018	Quarterly
Licensed Waste Management Facilities (Locations) Environment Agency - Anglian Region - Northern Area Environment Agency - Midlands Region - East Area	April 2019 April 2019	Quarterly Quarterly
Local Authority Landfill Coverage North Lincolnshire Council - Environmental Protection Team	May 2000	Not Applicable
Local Authority Recorded Landfill Sites North Lincolnshire Council - Environmental Protection Team	May 2000	Not Applicable
Potentially Infilled Land (Non-Water) Landmark Information Group Limited	December 1999	Not Applicable
Potentially Infilled Land (Water) Landmark Information Group Limited	December 1999	Not Applicable
Registered Landfill Sites Environment Agency - Anglian Region - Northern Area	March 2003	Not Applicable
Registered Waste Transfer Sites Environment Agency - Anglian Region - Northern Area Environment Agency - Midlands Region - Lower Trent Area	March 2003 March 2003	Not Applicable Not Applicable
Registered Waste Treatment or Disposal Sites Environment Agency - Anglian Region - Northern Area	March 2003	Not Applicable

Hazardous Substances	Version	Update Cycle
Control of Major Accident Hazards Sites (COMAH) Health and Safety Executive	April 2018	Bi-Annually
Explosive Sites Health and Safety Executive	March 2017	Annually
Notification of Installations Handling Hazardous Substances (NIHHS) Health and Safety Executive	November 2000	Not Applicable
Planning Hazardous Substance Enforcements North Lincolnshire Council - Planning Department	October 2015	Variable
Planning Hazardous Substance Consents East Riding of Yorkshire Council North Lincolnshire Council - Planning Department	October 2015 October 2015	Variable Variable
Geological	Version	Update Cycle
BGS 1:625,000 Solid Geology British Geological Survey - National Geoscience Information Service	January 2009	Not Applicable
BGS Estimated Soil Chemistry British Geological Survey - National Geoscience Information Service	October 2015	Annually
BGS Recorded Mineral Sites British Geological Survey - National Geoscience Information Service	April 2019	Bi-Annually
CBSCB Compensation District Cheshire Brine Subsidence Compensation Board (CBSCB)	August 2011	Not Applicable
Coal Mining Affected Areas The Coal Authority - Property Searches	March 2014	Annual Rolling Update
Mining Instability Ove Arup & Partners	October 2000	Not Applicable
Non Coal Mining Areas of Great Britain British Geological Survey - National Geoscience Information Service	May 2015	Not Applicable
Potential for Collapsible Ground Stability Hazards British Geological Survey - National Geoscience Information Service	January 2019	Annually
Potential for Compressible Ground Stability Hazards British Geological Survey - National Geoscience Information Service	January 2019	Annually
Potential for Ground Dissolution Stability Hazards British Geological Survey - National Geoscience Information Service	January 2019	Annually
Potential for Landslide Ground Stability Hazards British Geological Survey - National Geoscience Information Service	January 2019	Annually
Potential for Running Sand Ground Stability Hazards British Geological Survey - National Geoscience Information Service	January 2019	Annually
Potential for Shrinking or Swelling Clay Ground Stability Hazards British Geological Survey - National Geoscience Information Service	January 2019	Annually
Radon Potential - Radon Affected Areas British Geological Survey - National Geoscience Information Service	July 2011	Annually
Radon Potential - Radon Protection Measures British Geological Survey - National Geoscience Information Service	July 2011	Annually

Industrial Land Use	Version	Update Cycle
Contemporary Trade Directory Entries Thomson Directories	April 2019	Quarterly
Fuel Station Entries Catalist Ltd - Experian	May 2019	Quarterly
Gas Pipelines National Grid	July 2014	
Points of Interest - Commercial Services PointX	November 2018	Quarterly
Points of Interest - Education and Health PointX	November 2018	Quarterly
Points of Interest - Manufacturing and Production PointX	November 2018	Quarterly
Points of Interest - Public Infrastructure PointX	November 2018	Quarterly
Points of Interest - Recreational and Environmental PointX	November 2018	Quarterly
Underground Electrical Cables National Grid	December 2015	
Sensitive Land Use	Version	Update Cycle
Ancient Woodland Natural England	August 2018	Bi-Annually
Areas of Outstanding Natural Beauty Natural England	June 2019	Bi-Annually
Environmentally Sensitive Areas Natural England	January 2017	
Forest Parks Forestry Commission	April 1997	Not Applicable
Local Nature Reserves Natural England	March 2019	Bi-Annually
Marine Nature Reserves Natural England	January 2018	Bi-Annually
National Nature Reserves Natural England	June 2019	Bi-Annually
National Parks Natural England	April 2017	Bi-Annually
Nitrate Vulnerable Zones Environment Agency - Head Office Department for Environment, Food and Rural Affairs (DEFRA - formerly FRCA)	December 2017 October 2015	Bi-Annually
Ramsar Sites Natural England	April 2019	Bi-Annually
Sites of Special Scientific Interest Natural England	March 2019	Bi-Annually
Special Areas of Conservation Natural England	June 2019	Bi-Annually
Special Protection Areas Natural England	April 2019	Bi-Annually
