Zones of Theoretical Visibility (ZTVs)

- ZTV (bare earth)
- ZTV (with surface feature screening)
- Registered Park and Garden
- Public right of way
- Viking Way promoted route
- National Cycle Network Route 1

Zones of theoretical visibility (ZTVs) have been produced using a digital terrain model (DTM) that includes the screening effects of topography only, and a digital surface model (DSM) that includes the screening effects of topography, vegetation and buildings. Both the DSM and DTM were created using LiDAR data with 1m resolution. The ZTVs were generated based on a 'visibility point' set to 12m above existing terrain level. The viewer height has been taken as 1.6m in accordance with GLVIA best practice guidelines.
