

PUBLIC HEALTH OUTCOMES PROFILE 2016/17

FRODINGHAM CHILDREN'S CENTRE

This profile provides a brief picture of public health outcomes for mothers and under 5s in the Frodingham Children's Centre catchment area for 2016/17. This data, combined with service reach and activity data, should help agencies understand what factors are driving health improvement in this local population and enable the allocation and prioritisation of resources effectively. Each profile contains information on the child population in each catchment area, wider determinants of health and indicators of maternal and child health

- Frodingham Children's Centre is located in Scunthorpe South locality with the catchment including parts of Frodingham and Kingsway with Lincoln Gardens wards.
- 275 under 5s live in this catchment area which represents just under 3% of all under 5s in North Lincolnshire. It is the smallest catchment population of any children's centre in North Lincolnshire.
- In the adult population, life expectancy for females is in line with the local authority average and is slightly below for males, though not significantly.
- This area has higher than average levels of child poverty. Almost half of children reside in output areas that fall within England's 30% most deprived neighbourhoods and over 1 in 5 children under 16 live in a household in receipt of out of work benefits.
- Just under 20% of births in the area were to mothers born outside of the UK, which is slightly higher than for North Lincolnshire but lower than the England rate.
- The percentage of children ready for school at age 5 is lower than average, though not significantly.
- The proportion of children in receipt of DLA is highest in North Lincolnshire, although not statistically significant.
- Smoking in pregnancy is significantly above average here at more than 1 in 3 women (36%) which is 3 times the national average.
- Breastfeeding Initiation rates in the area are broadly average, however continuation rates at 6-8 weeks were the lowest of any Children's Centre area in North Lincolnshire and less than a quarter of the National average.
- The rate of A&E attendances in the area was the highest of any Children's Centre area and significantly higher than the overall North Lincolnshire rate. Admissions for accidental injury also show a relatively high rate, although numbers are small and the difference is not significant.
